x100 license Security awareness Users can
play a role in monitoring their physical
environment by taking a simple, but
effective, five-step approach:

Awareness—Create an awareness of the
potential of threats and respond to them
before they occur. Training—Conducting
user training on technologies used in the
facility, all of which can have a security

impact. Control—Apply physical controls to protect from physical access to a facility.

Assurance—Provide processes and policies to operate systems and to perform maintenance.

Awareness—Create an awareness of the potential of threats and respond to them before they occur. Each one of these five components can be fully automated using software provided in a cost-effective and user-

friendly manner. Confidentiality The following concepts are vital when handling information: Confidentiality—Protect information from public exposure.

Privilege—Distinguish what people can and cannot do with information.

Accountability—Establish who is accountable for information. Protecting information from

public exposure includes the following:

Protecting the local data center from physical attack by making a secure physical environment. Protecting networks from information leakage by limiting the access to only those with the right role. Protecting information from abuse and tampering by tracking the actions of authorized users. The following concepts are vital when handling information: Confidentiality—Protect information from public exposure. Privilege—Distinguish what people can and cannot do with information. Accountability—Establish who is accountable for information. Who has access to what is vital when controlling information. Managing information is the fundamental function of a

network. Controlling access to information requires separation of duties, which should include: Who has access to what When access is allowed What access is allowed Permission to perform an action Remote monitoring A downside to small home based surveillance systems is the ability for a remote intruder to gain access.
