Category:Engineering education Category:Engineering and technology books[Biochemical changes caused by an acute administration of nitro-benzylpiperidine]. A decrease of activity of N- and C-type fatty acid aminotransferases in rat liver homogenates was found in the early stages of an acute nitro-benzylpiperidine administration. The inhibition of aminotransferases proved to be reversible. The activity of the glucocorticoid-dependent 17 alpha-hydroxysteroid dehydrogenase, aldolase and phosphorylase in blood serum decreased during nitro-benzylpiperidine administration. The activity of phosphorylase decreased not only in the early phase of the experiment, but also on a repeated administration of the narcotic. Besides the inhibition of aminotransferases, the pharmacokinetics of
