You may get what you need with Kaspersky Endpoint Security 10 Service Pack 1 (64bit) ps: based on the information from Kaspersky Support forum Also the information on the below link I believe is correct too (I cannot tell you where I got it from - although I have no personal interest in this discussion) Timelapse videography Timelapse videography is the recording of a video sequence with the frame rate reduced such that some of the frames are exposed for longer periods than others. This can be done either by moving the camera during the recording or by altering the shutter speed during the recording. Synchronization When a video camera is moved while capturing the scene, there is a risk that the movement of the camera alters the relative exposure times of the different frames. A frequent consequence of this phenomenon is a drift in the vertical direction of the image. The frames can be synchronized by varying the shutter speed during the recording. The overall frame rate is set by the shutter speed. A longer shutter speed means that a shorter exposure is required for each frame. By adjusting the camera exposure time during the recording, it is possible to achieve the same frame rate as when the camera is moved. The only difference is that now the camera shutter speed is held constant, while the camera speed is adjusted. This can be done manually, by using the camera's time-lapse speed function, or by using a dedicated device. References Category:Filmmaking Category:VideoWednesday, November 4, 2012 Kellie Shortel has been named Executive Director of PRSSA-CALS. Shortel will take over for David L. Hansberry, who has accepted a faculty position at the University of Oklahoma's Norman, Oklahoma campus. Shortel has been with PRSSA 2d92ce491b
