The software only needs a good OST file to get the job done. I have a couple of questions on a 4a+1b SB-800 based setup I am working on (based on a Santec K2SB-8002SB-SB8004SB-SB800SB-SB800-HD800 and a P5S-SB-P5-SB-P5-RB-BS-S-RB-R-A-P-R-R-S-HB4). I am currently interested in running the "Party" mode (assuming these SB800 units have it) on a multi-channel setup. While a 4a setup is not exactly "multi-channel", the woofers in the SB-800 units have some 6dB less output than the in-wall speakers I have. There is a simple way to 'blend' the two outputs of the SB-800's, and I am interested in creating a crossover, or setting the "Party" mode to each channel on its own speaker (since it will essentially be a 4a system with two heads). Would this be possible?
