FormReturn is a comprehensive test or survey data collector and manager that features a local server database and a client module. FormReturn is a comprehensive test or survey data collector and manager that features a local server database and a client module. Can read old tests and create new ones The program integrates with scanners and extracts relevant data, such as the names and answers. The tool supports barcodes and, if available, these will be scanned. There is a built-in processing queue, which can be used to view and review the status of data extraction. Unidentified images are separated and dumped in a separate window. A nice addition is that, after data extraction is complete, users can review all the collected forms. This is a great method of weeding out Optical Mark Recognition errors! FormReturn can also create new questionnaires from scratch. Text strings can be inserted, as well as images and barcodes. Another interesting feature is that, besides the standard checkboxes, users have the freedom to add other, less conventional units, such as rectangle or circle shapes. This can greatly improve the looks of surveys! A server component and a client module for extended functionality The built-in FormReturn Server is used for database storage, form processing and task scheduling. It integrates seamlessly with the client and provides a lot of power and versatility to the core program. It is configured automatically, so users less tech savvy should not be afraid. A detailed interface that clings to simplicity The interface is very easy to navigate; although the utility features a lot of functions, they are grouped in a clear method, in order to avoid any confusion, as well as cluttering the screen. Most of the functions open multiple panels, which are placed laterally to the working area. This avoids the potential issue of distracting users, without sacrificing any of the functionality. A comprehensive tool for survey data collection To sum up, this utility is great for users who deal a lot with surveys or tests, and the related Optical Mark Recognition issues. Recurrence of Apert syndrome. Apert syndrome is a rare congenital disorder associated with craniosynostosis and midface hypoplasia. It is often lethal in the first few months of life. Despite surgical correction, some individuals show major clinical recurrence of the midface deformity. The purpose of this study was to evaluate clinical and radiographic recurrence of the midface deformity in a large group of patients with Apert syndrome and to identify

KeyMacro is a powerful Macro Recorder that offers a lot of power and versatility. The program will easily record and playback macros in applications that support such technology. This includes MS Office and other leading office suites, as well as third party applications such as word processors, spreadsheets and text editors. The tool also boasts an in-built database, which stores the recorded macros. Users can easily review and edit them, and also export these to text files for future use. This is a great application if you need to store and edit a lot of macros in a project, because you can easily access them and review them all the time! KeyMacro is multi-tasking ready, as it supports the scheduling and running of macros simultaneously. The only drawback is that, although a graphical interface is provided, users will need to have some knowledge of the Windows Task Manager to be able to utilize the tool properly. One of the most interesting features is the ability to automate the process of recording. The best part is that, when recording the macros, the tool will automatically capture the mouse movements, button clicks and keyboard strokes! This is a powerful tool, which can help people automate a lot of everyday tasks. A comprehensive tool for project management To sum up, if you need a tool that will allow you to record, playback and edit a lot of macros, KeyMacro is the perfect choice! Essentials: Windows Version: Windows 7/8/10 Version 5.0 Version 4.0 Version 3.0 Version 2.0 Version 1.1 This software is available in PATCHED and UNPATCHED versions. A neat way to increase productivity For those who work on large and lengthy surveys, this is a handy utility. It saves a lot of time by eliminating the need to repeatedly enter and correct test data, as well as making use of the data's already existent Optical Mark Recognition. Format of Survey File: Surveys can be saved in the following formats: The program can be used as a stand alone utility. It has a comprehensive database that is stored in a local folder on the user's computer. If you wish, the data can also be stored on a server. Data Storage: A single survey file can hold approximately 40 questions. Data can be saved in a local database. This can be selected at the start of the program. Data can be uploaded to a server as well, where it can be accessed from any computer. This is the default method of operation, and is recommended if the program will be used from several computers simultaneously. To save data for later access, the program allows several databases to be saved. This can be selected at the start of the program. Data of each saved database can be shared with other databases. Unique identifiers (ID's) are added to each record, and the programs' integrated database manager can be used to check the data's integrity. Records can be exported to an Excel spreadsheet, in either CSV or XLS formats. Data can be exported to several file formats. CSV and XLS formats are the most common, but there are others as well. Data can be uploaded to a server as well. Using the New Database Manager: The program includes a very powerful database manager that allows several databases to be saved. This allows the collected data to be viewed, reviewed and modified. Each database can be stored in several locations. Each can be accessed separately and shared with other databases. To access a database, the user clicks on the Database Manager icon and it opens a separate window. This window has two panes. The left-hand pane contains the databases' names, as well as their location. The right-hand pane displays the available records. Each record displays several fields
