## Safran Morpho Mso 1300 E Software Download [UPD]

1-08-2015 download morpho driver for mso 1300 usb Biometric Fingerprint / Smart Card Reader. The Morpho Smart 1300 Series integrates a fingerprint sensor and a smart card reader into the same device.

Q: iphone: update image from one UIImageView to another I have two UIImageViews, one on top of the other. The top one should be reusable over and over again, so I wouldn't want to create a separate image for it. So after capturing a photo the image is grabbed from an array and added to the image view. When the user taps on the image, the image view itself is reused. So there is one image view on top of another. Once the user taps on the image view, the whole image view is reused. However, the image from the image view is now gone. I don't want to be using addSubview to add the image view. How would I reuse the top image view so that when it's tapped, it has the captured photo? Or, how else should I be doing this?

A: There are two ways to go about this. The first is to hold a reference to the UIImageView in the top view, allowing it to be reused, and when tapped, simply swap it out with the captured image. The second way is to simply implement a top view that can be re-used to display one image, and a separate view that can be re-used to swap it for another image. I'll illustrate both ways. The first way is to store a reference to the UIImageView somewhere in your code in the top view, in the form of a property:

```
@interface TopView : UIView {
    UIImageView *imgView;
}
@property (nonatomic, retain)
UIImageView *imgView;
@end
@implementation TopView
@synthesize imgView;
- (void) loadImage:(UIImage *)image
{ imgView = [[UIImageView alloc] initWithImage:image];
```

---

`imageView.frame = self.bounds; [self addSubview:imageView]; }  
@end` And then in your view controller or view where you've  
got a "top view", you can simply change the data model.

Something like this: - (void) load
