Solucionario Moran Shapiro Termodinamica Tecnica

I need to get the second line. A: To

get the second line in the answer, you could do: `result = ""Reading. (x) = x^2"".split()` `result = result[1].rstrip(' ').split(' ')[0].rstrip('^ ')` I am assuming the second line is a printed message. If it is a line that you want to remove, then change the first line to: `result = ""Reading. (x) = x^2"".rstrip(' ').splitlines()[1]` If there are newlines at the end of each line of the printed sentence, change `[1]` to `[2]`. Similarly for the first line: `result = ""Reading. (x) = x^2"".rstrip(' ').splitlines()[0]` Instead of `strip()`, you could use `sub` or `rstrip`, just change the call in the lines mentioned above. The reason I left the strings as is above is that I did

not want to change the format of the strings. Q: Can I throw all my saved Streetpasses into the player cache when I'm done, or should I save them all separately? I have been using Streetpasses to store the spots I have already taken pictures at. I can then look up their records in the Streetpass Navi with my GPS and see how many spots I already have and I'm interested in taking at random. I do not have any plans to travel to new regions. Now, it occurs to me I could throw all my Streetpass records into the player cache at once. The chance for me to be able to spot your Streetpass is great, so I will be traveling often, so why not? This would be a significant

load on the data storage system, but I guess they can manage that. Are there any dangers to doing this? Is the evidence stored just like in the streetpass navi? Will this break any rules? A: This is a good question. StreetPass Spot is not limited to 8 players. But to be eligible for the Spot Pass, the player must visit StreetPass Spot. Yes, there is a cache in the StreetPass Navi, but there is nothing that says you d0c515b9f4
