Q: How to get Build object from BuildResult in Jenkins Pipeline I have a Jenkins pipeline file like this node (master) { stage("Test"){ // Build the project build job: 'AnotherProject', parameters: [[\${class: 'StringParameterValue', name: 'type', defaultValue: 'project'}]] build result: 'buildResult' build variable: 'buildResult' // Get the Build object def build = buildResult.build build } } I know that each build result can be accessed like this `${build.getBuildNumber()}`, `${build.result}` and `${build.context.getAsString("someName")}`. But how to get a Build object for the build result? I'm using groovy. A: You may not access build objects outside of a build job, but it is easy to get all of the information you want from inside the job. `buildResult.build.getFullDetails()` will give you all of the things you've mentioned like the build number. If you wanted the output for the build, you can use: `buildResult.build.getBuildOutput()`

Matt Cutts disclosed today that Google will start conducting its own mobile search quality tests, similar to the desktop tests Google has been using for years, back in February. The Mobile QA program will launch in beta beginning in February, "and will eventually provide a feedback loop for over ten million Android phones and tablets." Basically, Google will run the same mobile version of the same SERP test on those devices as Googlebot runs on the desktop

Determination of promoter activity of HMG-CoA synthase gene using a luciferase reporter gene. The mRNA levels of HMG-CoA synthase gene in L-carnitine- and L-tartrate- induced chondrocyte cell line C3H10T1/2 are almost two times higher than non-induced. In order to confirm the increase in promoter activity of HMG-CoA synthase gene is induced by L-carnitine and L-tartrate, the promoter region of human HMG-CoA synthase gene was cloned to construct a chimeric plasmid containing the firefly luciferase gene regulated by HMG-CoA synthase promoter. In addition, the expression of luciferase activity in C3H10T1/2 cells treated by chondrogenic inducers (L-carnitine and L-tartrate) was also investigated. As a result, the luciferase activity was significantly increased in C3H10T1/2 cells exposed to chondrogenic inducers. These results demonstrate that the chimeric plasmid constructed can be used for the analysis of the gene expression of HMG-CoA synthase gene. In addition, this report provides a useful system for the further study on transcriptional regulation in chondrogenic cells.

Overexpression of NMDA receptor NR1-subunit induces synthesis of an NR1-subunit heterodimer in BHK cells. We have overexpressed the N-methyl-D-aspartate receptor (NMDAR) NR1-subunit in the BHK21-C13 cell line. The NR1-transfected cells are stably expressing NR1-subunit
