shock in children admitted to a pediatric intensive care unit. To determine the epidemiology and outcomes of lactic acidosis (LA) in children admitted to a pediatric intensive care unit (PICU), and to study the relationship between the clinical features and the presence of LA. Retrospective case series analysis of prospectively collected data. PICU of a university medical center. Seventy-nine episodes of shock occurred in 55 children over a 4-year period, of which 10 were LA. The patients included 8 girls and 2 boys, aged 3 months to 16 years. LA developed over a wide range of mean and maximal lactate concentrations, ranging from 4.4 to 23.1 mmol/L and 7.2 to 35.1 mmol/L, respectively. Eight of the episodes were secondary to hypoxia. Nine episodes were associated with hypotension. LA was associated with poorer outcomes, as indicated by higher mortality rate (40%) than for all other causes of shock (13%) (P Blanche of Acre Blanche of Acre (ca. 1102 – 12 February 1184) was the wife of King Louis VII of France. She was the eldest child and only daughter of Guy of Lusignan, Prince

of Galilee and Sibylla of Jerusalem. She was eldest daughter of Guy and Sibylla. She was also Countess of Jaffa and Ascalon and Lady of Beirut. Her father was a minor member of the Holy Roman Empire, but was able

Co-expression of the Cu/Zn superoxide dismutase and the catalase transcripts in the plant-microbe symbiosis: a feature of the new phytopathogenic fungus *Fusarium oxysporum*. We report the first study on the expression pattern of genes encoding enzymes that are crucial in the defense response to reactive oxygen species in the

early stages of the infection of the fungus *Fusarium oxysporum* f. sp. *lycopersici* on tomato (*Lycopersicon esculentum* L.) plants. Northern blot analysis has revealed that the Cu/Zn superoxide dismutase and the catalase genes are co-expressed in *F. oxysporum* and are induced by the bacteria in a catalase-independent manner. A spot blot analysis revealed that the expression of Cu/Zn SOD and catalase is induced in both *F. oxysporum* and bacteria inoculated leaves. In bacteria inoculated leaves, the SOD and catalase transcripts accumulated in an area surrounding the site of bacterial growth.

Q: Do I need to add a Pattern to guard my page ID for a redirect to a different page ID? I am redirecting to a second page after a click event on my site using jQuery. In that function I have the following code: `return location.search == "?" ? location.protocol + '://' + location.host + location.pathname + "?pageld="+pageld : location.href;` I want to redirect to pageld2 instead of pageld if the user does not come in on that page first. The question I have is if I need to add a guard or

something to that effect in order to ensure that the redirect is only made if there is a pageid on the URL? A: If you need to ensure there
